00 — OVERVIEW

EXECUTIVE SUMMARY

EXECUTIVE SUMMARY · VENUES AND ASSET CLASSES

This report is published by RWA Foundation using data from DefiLlama's RWA perpetuals dataset. It covers the onchain market for perpetual futures referencing real-world assets: **equities, equity indices, precious metals, energy, foreign-exchange pairs, ETFs, private equity, bonds, and AI and compute infrastructure**. All figures are 30-day trailing figures as of the report date unless otherwise noted.

The scope of this report is venues and reference assets, not chains. It ranks the top venues by 30-day volume and open interest, breaks volume down by DefiLlama's asset-class taxonomy and by the underlying reference-asset group, and ranks the individual markets generating the most trading activity. No protocol-level infrastructure metrics beyond fees are included, this is a market-structure view of the venues and the assets referenced on them.

Across DefiLlama's tracked RWA perp dataset, **835 active markets across 16 venues generated \$128.4B in 30-day volume**, with \$4.86B in aggregate open interest and an estimated \$36.9M in protocol fees. Trade.xyz, a Hyperliquid HIP-3 deployer settling on Hyperliquid's core matching engine, dominates with roughly 70% of all RWA perp volume, more than the next fifteen venues combined.

Stock-perps are the largest asset class at \$66.48B (51.8% share) across 580 markets, followed by commodity-perps at \$30.37B (23.7%) and broad equity-index perps at \$14.97B (11.7%). By reference-asset group, public equities account for over half of volume, with precious metals and equity indices each carrying a roughly 13-14% share, and oil close behind at 9.3%.

01 - VENUE LANDSCAPE

16 venues

VENUE LANDSCAPE

SIXTEEN VENUES · ONE CARRIES 69.8% OF VOLUME

Sixteen venues currently carry tracked RWA perp volume, but the distribution is extremely top-heavy. **Trade.xyz alone generated \$89.68B of the month's \$128.4B in volume — a 69.8% share** — and carries \$3.72B of the \$4.86B in open interest across 89 listed markets. gmtrade is a distant second at \$12.18B (9.5%), followed by Variational at \$7.00B (5.5%), which alone accounts for 119 markets, more than any other venue including Trade.xyz.

Beyond the top three, Ondo, Lighter, Extended, edgeX and Aster each carry between \$2.5B and \$4.5B of 30-day volume, together making up a further 14% of the market. The remaining eight venues - Entropy, ApeX Omni, Kinetiq Markets, Paragon, Ostium, Helix, gTrade and Paradex - collectively account for under 1.5% of volume, though several of them, Ostium in particular, carry a disproportionate amount of open interest and market count relative to their volume share.

02 – ASSET CLASS MIX

\$66.48B

ASSET CLASS MIX

NINE ASSET CLASSES · STOCK-PERPS HOLD 51.8%

DefiLlama classifies each RWA perp market into one of nine asset classes. **Stock-perps are by far the largest, at \$66.48B in 30-day volume (51.8% share) across 580 individual markets** – more markets than every other asset class combined. Commodity-perps rank second at \$30.37B (23.7%) across 95 markets, concentrated in gold, silver, and crude oil.

Broad equity-index perps, referencing products like the S&P 500 and Nasdaq-100, generate \$14.97B (11.7%) from just 20 markets – the highest average volume per market of any class, reflecting deep liquidity concentrated in a handful of flagship index tickers. Forex-perps and etf-perps each carry a similar mid-single-digit share (\$7.53B and \$7.26B respectively), while a separate, smaller equity-index-perp class, along with private-equity, bond, and crypto-index perps, remain nascent, together under 1.5% of volume.

ASSET CLASS MIX – AT A GLANCE

Largest class stock-perp · 51.8%	Stock-perp markets 580	Commodity-perps \$30.37B · 23.7%

03 - REFERENCE-ASSET GROUPS

51.8%

REFERENCE-ASSET GROUPS

PUBLIC EQUITIES LEAD · METALS AND INDICES EACH ~13-14%

Grouping markets by underlying reference asset rather than DefiLlama's perp-type label tells a similar story from a different angle. **Public Equities lead at \$66.51B (51.8% share)**, essentially the same figure as the stock-perp class above. Precious Metals and Equity Indices are next, each contributing a close 13-14% of volume (\$17.28B and \$17.25B respectively), followed by Oil at \$11.95B (9.3%).

Fiat Currencies, the forex-perp category viewed by reference asset, contribute \$7.53B (5.9%), and a smaller but distinct AI & Compute Infrastructure group – perpetuals referencing data-center and AI-compute-linked names – adds a further \$4.70B (3.7%), pointing to an emerging niche layered on top of the more established equity, metals, and energy groups.

Public equities, precious metals, and equity indices together account for close to four in every five dollars of RWA perp volume.

REFERENCE-ASSET GROUPS – AT A GLANCE

Public Equities \$66.51B · 51.8%	Precious Metals \$17.28B · 13.5%	Equity Indices \$17.25B · 13.4%

04 – TOP INDIVIDUAL MARKETS

\$12.06B

TOP INDIVIDUAL MARKETS

TOP 15 MARKETS · FOURTEEN TRADE ON TRADE.XYZ

Ranking individual markets rather than venues or classes surfaces a narrower theme than the asset-class figures alone suggest. **Of the top 15 markets by 30-day volume, fourteen trade on Trade.xyz**, and a cluster of semiconductor and memory-chip names – SK hynix (listed twice, as SKHX and as an ADR under SKHY), Sandisk, Micron, Samsung Electronics, and NVIDIA – sit alongside a memory-themed ETF (Roundhill), making memory and semiconductor exposure the single largest thread running through the venue's top tickers.

The two broad equity indices, the Nasdaq-100 and the S&P 500, rank third and fourth respectively, and SpaceX, the only pre-IPO-style private name in the top 15, ranks fifth at \$6.31B. Gold and crude oil each appear twice: Trade.xyz lists both WTI and Brent crude oil as well as its own gold and silver contracts, while variational's XAU-USDC gold market is the only non-Trade.xyz entry in the top 15.

CLOSING STATEMENT

The RWA perpetuals market, taken as a whole, is new and sharply concentrated. A single Hyperliquid-settled venue, Trade.xyz, carries roughly seven in every ten dollars of volume and three-quarters of open interest, and within that venue a small cluster of tickers does an outsized share of the work: two broad equity indices, a run of semiconductor and memory names, and a handful of precious-metals and energy contracts.

"Memory and semiconductor exposure, not equities broadly, is what is actually driving single-market volume on the dominant venue."

Asset-class figures suggest a market roughly evenly split between equities, commodities, and indices, but the top-15-markets view tells a narrower story: memory and semiconductor exposure, not equities broadly, is what is actually driving single-market volume on the dominant venue. Precious metals and oil, tracked separately as commodity-perp and by reference-asset group, together account for close to a quarter of the market and remain concentrated around a handful of gold, silver, and crude contracts split across Trade.xyz and variational.

The long tail below the top eight venues, entropy through paradox, together carries well under 2% of volume despite offering meaningful market count and, in Ostium's case, open interest disproportionate to volume – a pattern consistent with a market still early in venue consolidation, where liquidity has not yet spread evenly across the growing number of places to trade these products.

Disclaimer. All data in this report is sourced from DefiLlama's RWA perpetuals dataset via LlamaAI. Figures reflect DefiLlama's own tracked-venue and tracked-market coverage as of the report date; other data providers may track a different set of venues or calculate volume, open interest, and fees differently, and totals or rankings in this report

may not match those published elsewhere. This report is provided for informational purposes only and does not constitute financial or investment advice.
